*Data is presented as simple averages of daily observations over the previous Year (i.e. the average is calculated over a period of 1 year). The simple average is calculated on daily observations over the previous year. The un-weighted value of inflows and outflows are calculated as the outstanding balances of various categories or types of liabilities, off balance sheet items or contractual receivables. The weighted value of HQLA are calculated as the value after haircuts are applied. The weighted value for inflows and outflows are calculated as the value after the inflow and outflow rates are applied. Total HQLA and total net cash outflows are disclosed as the adjusted value, where the adjusted value of HQLA is the value of total HQLA after the application of both haircuts and any applicable caps on Level 2B and Level 2 assets as indicated in this Framework. The adjusted value of net cash outflows is calculated after the cap on inflows is applied, if applicable.*

### **1. Qualitative Disclosure around LCR**

The Liquidity Coverage Ratio (LCR) aims to ensure that a bank has an adequate stock of unencumbered High-Quality Liquid Assets (HQLA) that can be converted into cash easily and immediately to meet its liquidity needs for a 30 calendar day liquidity stress scenario.

The LCR is calculated by dividing the amount of High Quality Liquid unencumbered Assets (HQLA) by the estimated net outflows over a stressed 30 calendar day period. The net cash outflows are calculated by applying RBI prescribed outflow factors to the various categories of liabilities (deposits, unsecured and secured wholesale borrowings), as well as to undrawn commitments and derivative-related exposures, netted by inflows from assets maturing within 30

days. Average LCR on a daily basis for the year ended 31<sup>st</sup> March 2022 is **216.12%**, above RBI prescribed minimum requirement of 100%.
